Duration	5 mins 53 secs
Grade	**15.00** out of 15.00 (**100**%)

Question **1**

Correct

Mark 1.00 out of 1.00

In linear search, if the target element is not found in the list, what is the result?

a. The last element is returned
b. An error is raised
c. The search is considered unsuccessful ✓
d. The first element is returned

Question **2**

Correct

Mark 1.00 out of 1.00

Which of the following scenarios is best suited for applying binary search?

a. When the list is unsorted
b. When the list contains duplicate elements
c. When the list is sorted ✓
d. When the list is very small

Question **3**

Correct

Mark 1.00 out of 1.00

What happens when the element is found in linear search?

a. The search starts over from the beginning
b. The search continues until the end of the list
c. The search stops immediately ✓
d. The search backtracks to find duplicate elements

Question **4**

Correct

Mark 1.00 out of 1.00

In the context of searching, what is a successful search?

- a. When the element is found in the list ✓
- b. When the list contains duplicate elements
- c. When the list is sorted
- d. When the search algorithm finishes

Question **5**

Correct

Mark 1.00 out of 1.00

Given an array arr = {45,77,89,90,94,99,100} and key = 100; What are the mid values(corresponding array elements) generated in the first and second iterations?

- a. 94 and 99
- b. 89 and 94
- c. 90 and 100
- d. 90 and 99 ✓

Question **6**

Correct

Mark 1.00 out of 1.00

In binary search, if the target element is less than the middle element, where does the search continue?

- a. In the right sublist
- b. In the left sublist ✓
- c. In the entire list
- d. At the beginning of the list

Question **7**

Correct

Mark 1.00 out of 1.00

What is the first step in binary search?

- a. Compare the target element with the middle element in the list ✓
- b. Sort the list
- c. Divide the list into two equal parts
- d. Compare the target element with the first element in the list

Question **8**

Correct

Mark 1.00 out of 1.00

Which of the following is not a limitation of binary search algorithm?

a. Must use a sorted array

b. There must be a mechanism to access middle element directly

c. Requirement of sorted array is expensive when a lot of insertion and deletions are needed

d. Binary search algorithm is not efficient when the data elements more than 1500 ✓

Question **9**

Correct

Mark 1.00 out of 1.00

If the target element is greater than the middle element in binary search, where does the search continue?

a. In the left sublist

b. At the beginning of the list

c. In the middle of the list

d. In the right sublist ✓

Question **10**

Correct

Mark 1.00 out of 1.00

In binary search, how is the middle element determined?

a. By starting from the first element

b. By dividing the list length by two ✓

c. By using a hash function

d. By comparing each element sequentially

Question **11**

Correct

Mark 1.00 out of 1.00

In _____ checks the elements of a list, one at a time, without skipping any element.

a. Hash search

b. Linear search ✓

c. Both (1) & (3)

d. Binary search

Question **12**

Correct

Mark 1.00 out of 1.00

What type of search would be most appropriate for finding an element in a list that is frequently updated?

- a. Linear search ✓
- b. Hash search
- c. Binary search
- d. Interpolation search

Question **13**

Correct

Mark 1.00 out of 1.00

What is searching in the context of computer science?

- a. Inserting elements into a list
- b. Sorting elements in a list
- c. Deleting elements from a list
- d. Determining whether an element is present in a list ✓

Question **14**

Correct

Mark 1.00 out of 1.00

Which method of searching involves sequentially comparing each element until a match is found?

- a. Linear search ✓
- b. Jump search
- c. Binary search
- d. Hashing

Question **15**

Correct

Mark 1.00 out of 1.00

What is the time complexity of binary search in the worst case?

- a. O(n log n)
- b. O(log n) ✓
- c. O(1)
- d. O👎
